PROFESSIONAL SUMMARY

Data Analyst with 5+ years of hands-on experience in data analysis and 8.7 years of overall professional experience spanning reporting, MIS, and field operations. Experienced in analyzing IoT-generated operational data, performing data cleaning, validation, and exploratory data analysis (EDA), and building dashboards and automated MIS reports for large-scale dairy operations. Skilled in SQL, Advanced Excel, Power BI, Python, Tableau, and Google Sheets for KPI tracking, data visualization, and reporting automation. Strong ability to transform operational data into actionable insights that improve business decisions and operational efficiency.

SKILLS

- SQL • Advanced Excel • Google Sheets
- Power BI (DAX) • Tableau
- Looker Studio • Python • Pandas
- NumPy • Matplotlib • MySQL • ETL
- Power Query • Data Cleaning
- Data Validation • Data Transformation
- Exploratory Data Analysis (EDA)
- KPI Reporting • MIS Reporting
- Dashboard Development
- Reporting Automation • Pivot Tables
- Power Query • SQL Joins • XLOOKUP
- Window Functions • CTEs
- Aggregate Functions
- Jupyter Notebook • GitHub

EDUCATION

B.E Electrical & Electronics Engineering
Sampoorna Institute of Technology and
Research, Ramanagara Dist.

Affiliated to VTU, Belagavi | 2015

CERTIFICATIONS

[Simplilearn SkillUP]

- Business Analytics with Excel
- Power BI for Beginners
- Introduction to Data Analytics & Analytics Projects
- AWS Cloud Architect

PROFESSIONAL EXPERIENCE

STELLAPPS TECHNOLOGIES PVT.LTD,

Data Analyst | Jan 2020 – Jan 2025 | Bangalore, Karnataka, India

- **Data Collection & ETL:** Performed ETL (Extract, Transform, Load) on real-time IoT data from 200+ Bulk Milk Coolers (BMCs) across Karnataka, tracking temperature, milk volume, DG, grid power, agitator, and compressor performance.
- **Data Cleaning:** Cleaned, transformed, and standardized raw datasets by handling duplicates, missing values, and correcting inconsistencies using Excel and Google Sheets
- **Data Validation:** Validated sensor data accuracy and identified abnormal values to improve data quality and reporting reliability.
- **Data Analysis:** Performed exploratory data analysis (EDA) and SQL-based data querying to identify trends, downtime patterns, fuel inefficiencies, and milk quality issues.
- **Dashboard Development & Reporting:** Built MIS reports and dashboards using Advanced Excel, Google Sheets, and Power BI for KPI tracking and operational monitoring. Automated daily, weekly, and monthly reports for management decision-making.
- **Achievements:** Analyzed fuel consumption patterns to identify inefficiencies and reduce costs by 20%. Monitored milk temperature deviations and cooling performance, helping reduce COB occurrences by 70% and improve milk quality. Evaluated temperature consistency and compressor efficiency to maintain milk chilling at 4°C, reducing spoilage and improving preservation.

Field Engineer / Consultant Field Engineer | Jun 2016 – Dec 2019

- Installed and commissioned IoT-based data loggers and sensor systems for Bulk Milk Coolers (BMCs) across remote dairy centers under KMF unions.
- Configured sensors to capture key parameters like temperature, milk volume, DG, grid power, agitator, and compressor performance.
- Monitored system performance, validated sensor data, and supported troubleshooting to ensure reliable operations.
- Prepared installation reports, service logs, and operational status updates for internal teams and KMF stakeholders.
- Coordinated with field teams for smooth implementation, preventive maintenance, and timely issue resolution.

PROJECTS

Karnataka Dairy Supply Chain Performance Analytics

[Tools: SQL | Excel | Power BI | Google Sheets]

- Analyzed milk procurement and chilling data from 200+ dairy collection centers to track milk volume, temperature compliance, fuel consumption, and equipment uptime.
- Built KPI dashboards for milk collection trends, DG runtime, compressor efficiency, and power utilization to improve operational visibility.
- Identified high fuel-consuming centers through trend analysis, supporting cost optimization strategies.
- Monitored temperature deviations and cooling performance to reduce COB occurrences and improve milk quality.
- Created automated MIS reports for management to track operational efficiency and maintenance requirements.

Bulk Milk Cooler (BMC) Predictive Maintenance Analysis [Tools: Excel | SQL | Power BI]

- Analyzed historical compressor runtime, temperature fluctuations, agitator cycles, and downtime logs to identify recurring equipment failures.
- Built failure trend reports and maintenance dashboards to support preventive maintenance planning.
- Detected anomaly patterns in compressor and cooling cycles to reduce unexpected breakdowns.
- Improved operational uptime by prioritizing high-risk centers based on performance data.

DG Fuel Consumption Optimization Dashboard [Tools: Excel | Power BI | SQL]

- Built a fuel usage dashboard analyzing **DG runtime data from 200+ dairy centers** to monitor fuel consumption patterns.
- Compared **grid power availability vs DG dependency**, identifying high fuel-consuming sites and contributing to **20% fuel cost reduction**.
- Developed KPI reports to track **fuel efficiency, DG utilization, and operational uptime** for resource optimization.
- Analyzed peak DG usage trends and downtime patterns, enabling data-driven decisions that improved power utilization efficiency and reduced operational inefficiencies.
